Part 1
1. What is i in quantum mechanics?
2. What is the complex conjugate of z?
3. What is the norm of a complex number?
4. What is the equation for a complex number z?
5. What is the equation for a complex number at unit radius?
6. What did Max Borne suggest about complex numbers?
7. What did Schrodinger think of the idea of complex numbers being related to probabilities?
8. What was the EPR paper attempting to show?
